Information for Contributors

Manuscripts in duplicate may be sent to any one of the editors whose names and addresses are listed on the inside front cover.

In order to assure rapid and accurate publication, it is essential that manuscripts be prepared according to the instructions given below. Manuscripts which do not conform to these specifications may have to be returned for retyping.

Preparation of Manuscripts

Article length should not exceed 5 typewritten pages, double-spaced on 8½" x 11" high quality paper (the complete manuscript, including space occupied by figures and tables, should be not more than 8 pages long).

Summary: The article must be preceded by a brief summary, typed single-spaced, not to exceed 10 lines in length (approximately 100-150 words). This paragraph should adequately summarize the pertinent findings of the paper.

Typing. Since articles are reproduced directly from manuscripts, the latter must be typewritten on good quality white bond paper. A black silk or carbon typewriter ribbon should be used, and special care should be taken to insure a sharp, clean impression of letters throughout. Use of an electric typewriter is strongly recommended. Erasures should be avoided. Care must also be taken to avoid errors in spelling, word division, and punctuation.

Manuscripts should be double-spaced, on only one side of the sheet; **references, footnotes, and figure legends should be single-spaced.** Typing area of the page must be as close as possible to 6½" wide by 9½" long.

Use of Symbols and Abbreviations. Abbreviations except for those in the Commission on Biochemical Nomenclature Document #1 (*Arch. Biochem. Biophys.* **115**, 1-12 (1966)) must be defined, and ambiguous abbreviations such as TCA, or P to signify anything but phosphate, should be avoided. Authors are urged to use chemical formulas, such as CCl_3COOH , wherever possible. If improper abbreviations are used it may be necessary to return manuscripts for retyping, which will delay their publication.

Footnotes should be typed single-spaced, at the foot of the page on which they are mentioned in the text. References and figure legends should be typed single-spaced on separate pages.

Illustrations and Tables. Photographs are acceptable. Mathematical or chemical symbols that cannot be typed should be inked in carefully in black. Structural formulas should be drawn in black ink. Illustrations and tables should be submitted on separate sheets. **Do not attempt to insert the figures, figure legends, or tables into the text.** This will be done by the Publishers.

All drawings should be done in black ink on white paper or tracing cloth; they must be planned for reduction to a width of not more than 5". Final size of the printed page is 5½" x 8⅜"; figures must be planned to fit these proportions.

Graph paper, if used, should be ruled in blue; grid lines that are to show in the final reproduction should be inked in black. High quality glossy prints are acceptable.

Page Numbers and Headings. Page numbers should be written lightly in blue (not typed) at the bottom of each page.

The title of the paper should be typed in capital letters near the top of the first page, with the name(s) and affiliation(s) of the author(s) typed just below. Headings within the article should be arranged according to their relative importance.

References to the literature may be cited by number and listed in numerical order in a single-spaced list placed at the end of the manuscript. Abbreviations of journal titles should be those used in *Chemical Abstracts*.

Mailing. To avoid creasing, please place manuscripts between cardboards when mailing.

Reprints

Reprint order forms are sent to the authors immediately upon acceptance of their manuscripts. The price list is included.

THE PINEAL

By **Richard J. Wurtman**

*Department of Nutrition and Food Science
Massachusetts Institute of Technology
Cambridge, Massachusetts*

Julius Axelrod

*Pharmacology Section
National Institutes of Health
Bethesda, Maryland*

Douglas E. Kelly

*Department of Biological Structure
School of Medicine, University of Washington
Seattle, Washington*

Discussing the significant advances in our knowledge of the structure and the functions of the pineal organ, this book places special emphasis on two kinds of pineal systems: the pineal glands of mammals, and the photoreceptive pineals of certain lower vertebrates. Areas of discussion include:

- Anatomy
- Biochemistry
- Pharmacology
- Physiology
- The Human Pineal In Health And Disease
- Pineal Biologic Rhythms

Zoologists, biologists, anatomists, biochemists, pharmacologists, physiologists, endocrinologists, and neurologists will find this unique work invaluable.

The Biology of Marine Mammals

Edited by **Harald T. Andersen**

*Institute for Nutrition Research
University of Oslo
Blindern, Norway*

This advanced treatise covers the physiological and behavioral functions of marine mammals. Particular attention is paid to those adaptive features making these animals fit for life in an aquatic environment.

CONTENTS:

Age Jonsgard, Age Determination of Marine Mammals

Heinrich Hertel, Hydrodynamics of Swimming and Wave-Riding Dolphins

G. L. Kooyman and H. T. Andersen, Deep Diving

Claude Lenfant, Physiological Properties of Blood of Marine Mammals

Robert Eisner, Cardiovascular Adjustments to Diving

Laurence Irving, Temperature Regulation in Marine Mammals
